THIRTY-SEVENTH ANNUAL REPORT
OF THE
BOARD OF SUPERINTENDENCE OF THE
DUBLIN HOSPITALS.

TO HIS EXCELLENCY THE RIGHT HON. ROBERT
OFFLEY ASHBURTON, BARON HOUGHTON,

Lord Lieutenant-General and General Governor of Ireland.

35, Dawson-street,
20th May, 1895.

MAY IT PLEASE YOUR EXCELLENCY :

We have the honour to lay before Your Excellency our Thirty-seventh annual Report on the condition and management of the City of Dublin Hospitals receiving Parliamentary Grants, and which were duly inspected by us during the year ended 31st March, 1895.

These are :—

1. Westmorland Lock Hospital.
2. The House of Industry Hospitals, viz :—
 - a. Hardwicke Fever Hospital.
 - b. Whitworth Medical Hospital.
 - c. Richmond Surgical Hospital.
3. Steevens's Hospital.
4. Meath Hospital and County Dublin Infirmary.
5. Cork-street Fever Hospital.
6. Rotunda Lying-in Hospital.
7. Coombe Lying-in Hospital.
8. St. Mark's Ophthalmic Hospital; and
9. Royal Hospital for Incurables, which receives a portion of the Concordatum Fund.

As mentioned in former Reports, our inspections are made without any previous notification to the officials of the several Hospitals.

We inquired into the condition of each Institution, to ascertain if the buildings were in good order, the general management satisfactory, and if due provision were made for the comfort and welfare of the patients.

We observed in all these Hospitals a gradual improvement in the condition and surroundings of the patients, and as a rule a desire on the part of the authorities to give effect to the suggestions made by us in our visits.

The various Statistical and other Tables in Appendices will be found similar in character to those that have hitherto appeared

4 *Thirty-seventh Report of the Board of Dublin Hospitals.*

in regular annual sequence, but at the same time indicative of the relative changes and results in the operation of the different institutions.

The financial accounts are rendered on a uniform system, so that it can be seen in Appendix whether any Hospital is extravagant in its expenditure as compared with others.

We submit for comparison the following abstract statement of accounts for years ended 31st March, 1894, and 1895:—

INCOME.	1893-4.			1894-5.		
	£	s.	d.	£	s.	d.
Government Grants,	15,722	15	9	15,722	15	9

Sundry other Disbursements, as detailed,	5,317	0	10	8,837	19	9
Total,	£42,837	19	0	£47,281	2	1

The work accomplished during the period under consideration was as follows:—

The number admitted during the year was 10,302, making the whole number under treatment 11,075, of whom 9,868 left the wards either cured or relieved, or were discharged for other causes, and 531 died.

Eight hundred and eleven patients remained under treatment in these Hospitals on the 31st March, 1895.

Exclusive of incurables, the mortality was 4·81 per cent. on those treated to a termination.

The total daily average number of beds occupied in these Hospitals throughout the year was 812·14.

The time spent in Hospital by each patient under treatment (omitting the patients in the Royal Hospital for Incurables) averaged 20·76 days.

Appendix.—Table No. 1 shows a list of diseases of patients treated in the several Hospitals and the number that died of any particular disease during the year ended 31st March, 1895.

Table No. 2 shows the average cost per bed occupied throughout the year ended 31st March, in each Hospital, for maintenance and for establishment, and for both, exclusive of buildings and furniture.

Table No. 3 shows the several sources of income of each Hospital.

Table No. 4 sets forth in detail the chief heads of expenditure of each Hospital.

Table No. 5 gives the number of patients treated in each Hospital, the mortality per cent., the average daily number of beds occupied during the year, and the present extent of accommodation for each class of patients.

Table No. 6 shows the prices of articles supplied to each Hospital per contract or otherwise.

Table No. 7 gives the various dietaries in use in each Hospital.

Table No. 8 gives the names of the Governors of each Hospital, and number of attendances during the year.

The epidemic of small-pox which prevailed during the year subjected to a severe strain the resources of the Cork-street and the House of Industry Hospitals; but we are glad to report that in these two Institutions every provision was made at the commencement of the epidemic for the reception and treatment of the earliest cases of the malady.

Means had also been provided for thorough disinfection of all materials used, and the destruction of such clothing as might be deemed necessary.

Notwithstanding these strenuous efforts to prevent every fresh case from becoming a new focus of contagion, the disease extended to an alarming extent at the close of the year.

In connection with this subject, we recommend that a separate detached apartment should be erected in each Fever Hospital, where discharged patients could be thoroughly bathed, and put on their own disinfected clothing, previous to returning home.

We wish to remark that many cases of the disease occurring in the city were concealed, and not notified to the authorities, nor was the aid of a physician sought, so keen and anxious were the relatives to nurse their own sick, and to avoid their removal to Hospital.

Some doubts have been entertained as to the advisability of prohibiting without exception the visits of parents and immediate relatives to small-pox patients.

With regard to this arrangement we expressed our opinion in a former Report, and considered the prohibition of such visits harsh to the patients and their relatives; who often desire to see one another from motives of natural affection, and in respect to religious considerations, arrangements of little matters of property, dying wishes, &c., &c.

If it were generally known that a prohibition against the visits of relatives were rigorously enforced, many patients would not go to Hospital, and the result would be a greatly increased danger to the public; for contagion would extend more rapidly from the crowded homes of the poor to their neighbours, than from the sick in well ventilated wards to those who pay them short visits—with proper precautions.

THE WESTMORLAND LOCK HOSPITAL.

From all we have seen during our inspection we have come to the conclusion that the patients here are as well cared as the

structural defects of the Hospital will admit of. It has fairly met general requirements, and has been satisfactorily conducted in detail. Order, cleanliness, and discipline are strictly carried out. The supply of bedding and clothing is good and sufficient, and the patients' wants are carefully provided for. The meals are well cooked and served with punctuality.

The surgeons have resumed the prescribing of the diets giving the variety which the dietary as framed always afforded. This consists alternately of beef or mutton, roast or boiled, soup, fresh vegetables, and potatoes, also beef tea for patients on low diet.

The registrar orders the provisions according to the daily dietary book, which are received by the Matron, who vouches as to their quality and weight, and then issues them to the several departments for each day's consumption.

All clothing, nurses' and servants' uniforms, are cut out by the Matron, and made up by the patients under her supervision; these articles are marked with the Hospital stamp, and dated before distribution.

Stock books are strictly kept by the nurses and inspected by the Matron at regular intervals. The washing is satisfactorily done in the laundry, where there is an abundant supply of hot and cold water. The lavatories and bath rooms are fairly arranged, but are still capable of improvement.

There were 69 patients in this Institution on the 1st of April, 1894; 490 were admitted, and 17 infants were born in the house during the year; 493 were discharged; 11 died; and 72 remained on the 31st March, 1895.

The mortality was 2.18 per cent. on the total number treated to a termination.

The time spent in Hospital by each patient averaged 42.10 days, and the average daily number of beds occupied during the year was 66.44.

STEEVEN'S HOSPITAL.

We found this Hospital on inspection in a creditable condition of order and cleanliness. The Medical and Surgical wards had recently been painted and renovated.

The old fixed presses had been removed, and new presses for patients' clothing substituted. We observed that glass slabs on tables for surgical dressings, and metallic boxes for keeping antiseptic dressings are in use in the Surgical wards; also that a sterilizer embodying the most recent improvements is in use for antiseptic dressings.

We have ascertained that all infected articles of clothing are at present placed immediately in a receptacle containing a strong solution of carbolic acid.

The food was of good quality and well cooked, and everything that was seen gave evidence that the wants of the patients were carefully attended to, and that they were kindly treated.

The nursing staff under the present qualified and experienced Superintendent is efficient, and has much improved within the last few years.

The presses which contain the linen, and the Medical and Surgical appliances were found in order. The Staff Nurse of each ward is provided with a Stock Book in which is entered every article under her immediate charge, recording the date when each article was supplied, lost or broken.

The Superintendent of Nurses inspects and examines these books periodically, and affixes her initials at each inspection; the books being presented to the Board and checked by them every three months.

We found that the water-closets in connection with the Royal Irish Constabulary wards were in course of re-construction on the most approved principles, and the lavatories throughout the hospital in good order, with ample provision for emptying and rinsing ward utensils. We suggest the substitution of glass bed urinals for those of porcelain, at present in use, as the imperfection of the glazing of porcelain favours the deposition of organic matter and renders the vessel offensive and difficult to keep clean.

On a former occasion we commented unfavourably on the post-mortem room, and regret that on inspection it was found in the same unsatisfactory condition. It is used as a mortuary and for the performance of autopsies, an arrangement which is not in accordance with modern requirements. For obvious reasons the mortuary should be in an adjoining apartment, and appropriately arranged, so as to show respect to the feelings of the friends of the deceased patients.

Since our inspection we have been informed that the Governors had determined to construct a disinfecting chamber, a new mortuary, and a proper post-mortem room when funds should be available for that purpose.

The improvements in the fever house are to comprise separate wards for different fevers, and an observation ward.

Estimates have also been accepted for replacing the old canal water pipes, which were constantly bursting, by Varty pipes, and to remodel on a new and economic plan the entire of the water supply system in the house.

On the 1st April, 1894, 116 patients remained in Hospital; 1,346 were admitted during the year; 1,288 were discharged; 65 died; and 109 remained on the 31st March, 1895.

The mortality was 4.80 per cent. on the total number treated to a termination.

The time spent in Hospital by each patient averaged 24.82 days, and the average daily number of beds occupied during the year was 99.43.

THE MEATH HOSPITAL.

This hospital has been brought into a state of great efficiency of late years; it is equipped with a skilled nursing staff, and we have been informed that the night are as competent as the day nurses.

On the day of inspection the wards presented a cleanly and cheerful appearance, and the beds and bedding were properly looked after. We observed that the cards which were over each bed carefully noted the condition and progress of the patient.

We found all the various surgical appliances in perfect order, and ready for immediate use.

In the apothecary's department several improvements have been made, including a new stove and a patent enamelled earthenware sink, &c.

The greatest care continues to be exercised in keeping ready all apparatuses and antidotes for any emergency.

The Standing Committee have long felt that the accommodation in the medical department of the hospital was inadequate to meet the increasing demand on its resources; they have therefore determined to remedy this defect by building a new detached wing for the isolation of infectious diseases, having wards capable of containing 40 beds, with separate rooms for the nursing staff. The total cost of this building when complete and furnished will probably be £7,000.

The Medical Board have also erected a new Pathological and Bacteriological department, which, when completed, will be provided with every necessary requirement at a total cost of about £500.

We visited the culinary department and examined the various articles of food, including bread, beef, tea, milk, &c., which were found without exception of good quality; as far as we could judge the cooking was satisfactory, and no complaint was made to us as to the meals served in the wards.

We inspected the registry of patients and the account books, which appeared to be kept with care and accuracy, and the returns called for, from time to time, are made out and forwarded to this Board with promptitude.

There were 95 patients in this Hospital at the commencement of the year; 1,173 were admitted; 1,117 discharged; 67 died; and 84 remained on the 31st March, 1895.

The mortality was 5.65 per cent. on the total number treated to a termination.

The time spent in Hospital by each patient averaged 24.40 days, and the average daily number of beds occupied during the year was 84.75.

CORK-STREET FEVER HOSPITAL.

On the occasion of our visit to this Hospital we inquired closely into the various matters connected with its management. We were much gratified by the order, regularity, and cleanliness which prevail in the several departments.

The patients were carefully attended, the provisions were of good quality, and the kitchen accommodation and cooking utensils sufficient and in order.

In several of the wards the baths are stationary, an arrangement for general use we cannot quite approve of, as emanations from warm baths may be injurious to the rest of the patients in the ward.

Should a bath be necessary occasionally in a ward, a full-sized one on rollers ought to be on hand, which could be brought to the bedside, and used only in extreme cases. We are of opinion that bath-rooms suitably constructed apart from the wards would be advisable.

Owing to the prevalence of small-pox and the consequent need of separate accommodation for the nurses in attendance on that disease, the Managing Committee have erected a galvanised-iron house capable of accommodating sixteen nurses, with the necessary bath-room, trunk-room, lavatory, and kitchen.

New fire-places have been put up in the Recovery House, and doors open from the nurses' kitchen into the wards, so as to facilitate the nursing and supervision of the patients.

We were much pleased to observe the system of local telephones which has been recently erected in connection with all the wards and the porter's lodge, so as to facilitate answering the frequent inquiries of patients' friends at the gate.

We have been informed that owing to the increase of work an Assistant Matron has been appointed since September, and that the Managing Committee contemplate an addition to the laundry machinery with the view to economize labour.

At the commencement of the year 78 patients remained in the Hospital; 1,661 were admitted; 1,499 were discharged; 158 died; and 82 remained on the 31st March, 1895.

The mortality was 9.53 per cent. on those treated to a termination.

The average daily number of beds occupied was 101.98, and the time spent in Hospital by each patient averaged 21.40 days.

HOUSE OF INDUSTRY HOSPITALS.

We examined the several departments of these Hospitals and found the wards and corridors scrupulously clean and in order. The patients' bedding was sufficient and in proper condition. The supply of linen was ample, and the laundry arrangements good. The nursing appears to be well carried out.

In addition to affording medical education to a large class of students, nurses are trained under the supervision of a highly qualified Superintendent, by which means this Institution renders a great service to the community at large. We consider that every Hospital should, as far as possible, afford facilities for the training of nurses, but the funds of such Institutions and the accommodation intended for patients should not be used for that purpose.

Since our last inspection new water-closets of the most approved pattern have been fitted up in the Whitworth Hospital.

All stores are now received and issued in a central store room which is sufficiently commodious and thoroughly ventilated. The larder has also been much improved.

For some years a project for the re-construction of the Richmond Hospital has been under consideration, and the Board of Governors only awaited the necessary funds to enter on the work. Dr. Gordon was able, by means of a charitable bequest entrusted to him, and with the sanction of the Master of the Rolls, to give a donation of £5,000 towards building a new Richmond Hospital. Mrs. Hamilton has also generously contributed a similar sum towards this undertaking.

We have learned with much satisfaction that the Governors have at a cost of £1,500 purchased a considerable area of most objectionable and insanitary grounds and buildings, in the vicinity of these Hospitals, which will lead in a few months to the removal of a number of cow yards which have been a nuisance in the district, and ought never to have been allowed within the city bounds. The general sanitary condition of the entire district will be benefited by these improvements.

At the outbreak of the present epidemic of small-pox, the Governors had the Auxiliary Hospital ready for the emergency, and were at once able to place it and an efficient staff of nurses at the disposal of the sanitary authorities. As the epidemic increased it was found necessary to apply for additional accommodation, and the Board of Governors promptly met the new demand, and placed at the disposal of the Authorities the whole of the Hardwicke Hospital for the reception and treatment of small-pox patients. The strictest rules are in force for the complete segregation of patients, nurses, and servants. Whenever opportunity offers the wards are thoroughly disinfected.

It was reported to us that a child named Edward Wren died of small-pox on the 16th of July, and that the body had remained unburied for the space of three days in the mortuary of the Hospital. As the danger of contagion emanating from such bodies is very great we addressed a communication to the Governors on this subject, and have been informed in reply that the delay in the speedy interment of this body was caused in consequence of the difficulty in obtaining all particulars required by the Cemeteries Committee's Office.

We have been assured that the Governors use their best efforts to prevent the spread of contagion, and that in the event of a patient dying of small-pox, directions have been issued to have the body disinfected and placed in a coffin, and interred with as little delay as possible.

The accounts in connection with the Hospitals are examined each month by the Governors, and an analysis of same, showing the average number of patients, nurses, and servants, and the average cost of these per day and month; also comparison with the corresponding month of previous year is submitted to them, which enables them to check any undue increase in expenditure, as well as showing the head under which the increase has arisen. The result of this careful supervision has been a marked increase in the efficiency of the Hospitals, the dietary of the patients being very good, and their comfort furthered in every respect.

Hardwicke Fever Hospital.

Twenty-three patients remained in the Hospital on the 1st of April, 1894; 784 were admitted during the year; 731 were discharged; 58 died; giving a mortality of 7.33 per cent. on the total number of cases treated to a termination.

The average daily number of beds occupied during the year was 42.62, and the time spent in Hospital by each patient averaged 17.04 days.

Whitworth Medical Hospital.

On the 1st of April, 1894, 34 patients remained in Hospital; 627 were admitted; 558 were discharged; 55 died; giving a mortality of 8·97 per cent. on the total number of cases treated to a termination.

The average daily number of beds occupied throughout the year was 36·54; and the time spent in Hospital by each patient under treatment averaged 19·65 days.

Richmond Surgical Hospital.

There were 54 patients in this Hospital when the year commenced; 693 were admitted; 666 were discharged; 26 died; giving a mortality of 3·75 per cent. on 692 cases treated to a termination.

The average daily number of beds occupied in the year was 52·98; and the time spent in Hospital by each patient averaged 21·81 days.

ROTUNDA LYING-IN HOSPITAL.

The gentlemen constituting the Board of Governors of this Hospital appear to be unsparing of time and trouble in their efforts to make the Institution a real boon to the patients for whom it is designed.

Its high educational reputation is fully maintained under the management of the present Master. We found every department of the Hospital in good order, and supplied with the most modern improvements.

The patients receive every necessary care and attention, and the several articles of food which we examined were of good quality.

Considering the large class of students and nurses who attend the Hospital, we feel it cannot be too forcibly impressed on them that it is their imperative duty to take the most stringent precautions against the danger of their becoming the means of disseminating contagion.

We were glad, however, to see that the strictest antiseptic precautions continue to be adopted for the safety of patients. Pupils are required before examining any patient to thoroughly wash and disinfect their hands.

The walls of the apartment in which labour is conducted are formed of a hard non-absorbent substance, and the flooring is laid with concrete, so that the entire apartment may be washed and disinfected when necessary.

As the new wing on the west side is at present in process of construction, we cannot report on it as fully as we could wish; but we are informed that it will afford the necessary accommodation urgently needed in connection with the Lying-in Hospital, and also provide a separate building for the treatment of the diseases of Woman in lieu of the existing auxiliary Hospital, which is totally unsuitable for the purpose.

Although the expenditure of the Hospital is considerable, it is gratifying to find that the income has increased.

The nursing, which formerly was a source of expense, now produces a considerable revenue; and it is a matter of special gratification that the Corporation grant has been restored.

On the 1st of April, 1895, there were 36 patients in the labour wards; 1,538 were admitted during the year; 1,239 were discharged after delivery; 300 were discharged, not having been delivered; 6 died; and 29 remained in Hospital at the end of the year.

Twenty-two patients remained in the auxiliary or chronic department on the 1st of April, 1894; 420 were admitted; 396 discharged; 18 died in the year ended 31st March, 1895; and 28 then remained.

The average daily number of beds occupied throughout the year by labour cases was 32.60, and that of the chronic class 27.62.

The time spent in Hospital by labour cases averaged 7.56 days, and that by the chronic class 22.81 days.

The mortality of the labour patients, deducting non-parturient cases, was 0.48 per cent., and that of the chronic class 4.34 per cent.

COOMBE LYING-IN HOSPITAL.

We are able to report that the management of this Hospital under the present Master, Dr. F. Kidd, has made great progress during the last year.

It continues to give valuable assistance to Lying-in women in this poor district which is greatly needed, and it affords considerable advantages in forwarding medical education.

We were well satisfied with the whole interior of the Hospital, and consider that its condition is very creditable to the Governing Body.

The wards are bright, clean, and well ventilated, and the floors all through the Maternity department have been stained, and kept polished with bees' wax and turpentine.

The walls in the Labour and Convalescent wards and corridors have been oil painted. Lock up presses have been provided for "poisonous" solutions, such as corrosive sublimate and carbolic acid, the key being kept by the Sister in charge of the ward.

All labour patients are now confined in a special ward, and transferred a few hours afterwards on a carriage with rubber tyres to convalescent wards. After the discharge of one set of labour patients, the contents of the ward, including bedsteads and wire mattresses, are thoroughly washed with turpentine and carbolic acid solution, and the ward is afterwards purified by sulphur fumigation for twenty-four hours.

We have ascertained that all soiled linen is promptly removed from the wards and placed in an outhouse quite separate from the Hospital buildings.

We observed notices conspicuously placed in each ward, drawing the attention of the nurses and students to the necessity of taking antiseptic precautions, and giving details how these should be carried out.

We have been informed that the nursing staff is efficient, and perform their duty with intelligence and fidelity, and due attention is given to those cases requiring assistance during the night.

We observed that the objectionable practice, contrary to our repeated recommendations, of storing in the basement the straw used for patients' bedding is still persevered in.

The danger from fire of straw stored immediately under the wards of the Lying-in Department must be obvious to any one.

Thirteen labour patients remained in Hospital on the 1st of April, 1894; 499 were admitted during the year; 495 were discharged; 96 were discharged, not having been delivered; 4 died; and 13 remained at the close of the year.

Eight patients remained in the chronic wards on the 1st of April, 1894; 263 were admitted; 251 discharged; 4 died; and 16 remained at the close of the year. The average daily number of beds occupied throughout the year by labour cases was 11.30, and by chronic cases 12.57.

The time spent in Hospital by labour patients averaged 8.05 days, and that by the chronic class 16.93 days.

The mortality of patients admitted to the labour wards, deducting 96 that were discharged, not having been delivered, was 4 deaths in 403 cases, or 0.99 per cent., and for the chronic class 4 died, giving a mortality of 1.56 per cent.

THE ROYAL HOSPITAL FOR INCURABLES.

On inspecting this Hospital it presented its usual appearance of being kept in most creditable order; it continues to enjoy the confidence of all ranks and classes, and receives a large support from the public.

Everything that human skill and kindness can effect is provided to alleviate the sufferings of the patients.

The additions and improvements carried out in the last few years are very considerable and greatly add to the efficiency of the Hospital.

Since our last inspection, the new pavilion containing two wards has been opened. In the decoration of these wards a different shade of green has been selected for the wood-work, and a pleasing contrast has been effected between them and the other wards.

A steam boiler has also been erected for heating these wards, lavatories, and baths, which will add much to the comfort of the patients.

The special gearing adopted for opening and closing the windows is easily worked, simple and not likely to get out of repair. This arrangement is said to be an improvement on the ordinary double sashes, which are often troublesome to manage, owing to the sash lines knotting, breaking, or otherwise getting out of order.

The Hospital is now capable of accommodating 220 patients.

One hundred and eighty patients remained in Hospital on the 1st of April, 1894; 91 cases were admitted; 2 resigned; 59 died during the year; and 210 remained on the 31st March, 1895.

14 *Thirty-seventh Report of the Board of Dublin Hospitals.*

The mortality was 96·72 per cent. on the total number of cases treated to a termination.

The time spent in Hospital by each case averaged 266·22 days.

The average daily number of beds occupied throughout the year was 197·66.

ST. MARK'S OPHTHALMIC HOSPITAL.

We have frequently commented on the structural defects of the basement, and the inadequate accommodation for servants. We have also adverted to the out patients' department as not being sufficiently spacious or well ventilated for the large number of patients who attend.

Considering that improved accommodation is so imperatively necessary to efficiently carry on the service of the Hospital, we hope that its amalgamation with the National Eye and Ear Infirmary will soon be effected. This amalgamation is said to be in progress.

On the 1st of April, 1894, 45 patients were in Hospital; 700 were admitted during the year; 698 were discharged; and then 47 remained.

The average daily number of beds occupied in Hospital was 45·65, and the time spent in Hospital by each patient averaged 22·36 days.

THOMAS EDWARD GREY,
Registrar.

No. 10,458.

Dublin Castle,
21st June, 1895.

SIR,

I have to acknowledge the receipt of your letter of the 13th instant, forwarding, for submission to His Excellency the Lord Lieutenant, the Report of the Board of Superintendence of the Dublin Hospitals for the year ended 31st March, 1895.

I am, Sir,

Your obedient Servant,

D. HARREL.

W. J. MARTIN, Esq., M.D.,

Secretary,

35, Dawson-street,

Dublin.
